

YASH PAGHADA

SOC Analyst | Cybersecurity Analyst | Security Operations Specialist

Surat, Gujarat, India | +91 8799104108 | paghadayash@gmail.com | <https://linkedin.com/in/yash-paghada>

PROFESSIONAL SUMMARY

Cybersecurity-focused BCA graduate (2026) with hands-on experience in Security Operations Center (SOC) operations, security monitoring, cloud SIEM (Microsoft Sentinel, Azure), on-premise SIEM (Wazuh, Splunk), Active Directory administration, endpoint telemetry (Sysmon), honeypot deployment, and AI-powered penetration testing. Skilled in intrusion detection, alert triage, threat intelligence analysis, security incident identification, and indicators of compromise (IOC) investigation. Proficient in KQL, Wireshark packet analysis, Nmap, Burp Suite, Metasploit, MITRE ATT&CK framework, and Cyber Kill Chain methodology. Seeking a SOC Analyst or Security Analyst role to contribute to vulnerability management, incident response, and cyber threat detection.

EDUCATION

Bachelor of Computer Applications (BCA)

Completed: May 2026

Vivekanand College — Veer Narmad South Gujarat University (VNSGU), Surat, Gujarat, India

CGPA: 7.64 / 10 | **Relevant Coursework:** Network Security, Information Security, Database Management, Python Programming

INTERNSHIP EXPERIENCE

Cybersecurity Intern | CodeInYourSelf

January 2026 – July 2026

- Conducted security monitoring and vulnerability management activities using Nmap, Wireshark (packet analysis), and Burp Suite to identify, triage, and document cyber threats across 5+ test environments.
- Deployed and configured Wazuh SIEM for centralized Windows Event Log ingestion, security alert generation, real-time intrusion detection, and security event correlation across multiple endpoints.
- Performed web application penetration testing against DVWA targeting SQL injection, XSS, and brute-force attack vectors; deployed SafeLine WAF as a defensive countermeasure and validated OWASP Top 10 blocking rules.
- Engineered a Python-based SOC automation pipeline integrating tshark for live packet capture, rule-based anomaly detection, IOC identification, and AI triage agents for automated threat classification with MITRE ATT&CK mapping.

PROJECTS

Azure Honeypot & Microsoft Sentinel SIEM Lab

July 2026

Technologies: Microsoft Azure, Microsoft Sentinel, Log Analytics Workspace, KQL, Windows 11 Pro VM, Azure NSG, Azure Monitor Agent (AMA), Geo-IP Watchlist, Windows Event Logs

- Deployed an intentionally exposed Windows 11 Pro honeypot VM in Azure (NSG all-ports open, Windows Defender Firewall disabled) to attract real-world cyber threats; confirmed live attacker traffic and security incidents via Event ID 4625 (failed logon) within minutes of exposure.
- Centralized Windows Event Logs into a Log Analytics Workspace and deployed Microsoft Sentinel as the cloud SIEM; configured Windows Security Events via AMA data connector and a Data Collection Rule (DCR) for continuous security monitoring and intrusion detection.
- Authored KQL queries to isolate 4625 security alerts and failed logon events; imported a ~54,000-row geo-IP Watchlist and applied `ipv4_lookup()` for threat intelligence enrichment — mapping attacker IOCs (IP addresses) to geographic origin.
- Built a Sentinel Workbook live attack map visualizing global attacker distribution, replicating a real SOC threat intelligence dashboard encompassing log onboarding, alert triage, risk assessment, and geo-visualization.

Active Directory & Enterprise Network Home Lab

July 2026

Technologies: Windows Server 2019, Windows 10, Active Directory Domain Services (AD DS), PowerShell, DHCP, NAT, DNS, VMware, VirtualBox

- Deployed a Windows Server 2019 Domain Controller (mydomain.com) with a domain-joined Windows 10 client; configured AD DS, Organizational Units (OUs), role-based user accounts, NAT (RAS), DNS, and DHCP scope (172.16.0.100–200).
- Automated bulk user provisioning via PowerShell scripting simulating enterprise IT onboarding; validated end-to-end domain authentication for all provisioned accounts.

Sysmon + Splunk SIEM Monitoring Lab

July 2026

Technologies: Sysmon v15.21, Splunk Enterprise 10.4.1, Windows Server 2019, SwiftOnSecurity Config, Windows Event Logs, Endpoint Telemetry

- Deployed Sysmon v15.21 (SwiftOnSecurity config) for granular endpoint telemetry and intrusion detection; configured Splunk Enterprise 10.4.1 with Windows & Sysmon Add-ons for security event correlation, indexed 590+ security events, and resolved a non-standard Sysmon log channel via `manual.inputs.conf`.

Penligent AI-Powered Penetration Testing Lab

June 2026

Technologies: Penligent AI v2.1.4, DVWA, Kali Linux, Ubuntu Server 22.04, Apache2, MariaDB, Python, curl, MITRE ATT&CK, Cyber Kill Chain, CVE Analysis, SOC 2, ISO 27001

- Deployed DVWA on Ubuntu Server (Apache2 + MariaDB) and Penligent AI v2.1.4 on Kali Linux; executed a 4-phase AI-automated pentest mapping to the Cyber Kill Chain (RCE/CVE — T1190, auth bypass, SQL injection, XSS); observed autonomous CSRF self-correction by the AI reasoning engine.

- Performed post-exploitation MariaDB enumeration to extract MD5-hashed user credentials (malware analysis analogue); completed a vulnerability management risk assessment and exported a SOC 2 / ISO 27001 compliance-ready penetration testing report.

SOC AI Agent, SafeLine WAF & Wazuh SIEM Labs

2026

Technologies: Python, tshark, Kali Linux, Ubuntu Server, MITRE ATT&CK, SafeLine WAF v9.3.9, Docker, OpenSSL, Wazuh, TCP/IP, OWASP Top 10, File Integrity Monitoring (FIM)

- Built a Python SOC AI pipeline using tshark packet analysis for live network security monitoring, IOC detection (suspicious IPs), and MITRE ATT&CK-mapped JSON alerting. Deployed SafeLine WAF v9.3.9 in Docker with SSL/TLS to block OWASP Top 10 attacks. Deployed Wazuh SIEM for multi-endpoint log correlation and File Integrity Monitoring (FIM).

CERTIFICATIONS

Certified LLM Security Professional (CLLMSP) — Red Team Leaders	June 2026
CompTIA AI Prompting Essentials — CompTIA	May 2026
CompTIA AI Essentials — CompTIA	May 2026
AI Fluency: Framework & Foundations — Anthropic	June 2026
Microsoft AI Skills Fest — Microsoft	June 2026

TECHNICAL SKILLS

Cloud & SIEM: Microsoft Azure, Microsoft Sentinel, Log Analytics Workspace, KQL (Kusto Query Language), Wazuh, Splunk Enterprise, Azure Monitor Agent (AMA), Security Monitoring, Security Event Correlation

Security Tools: Nmap, Metasploit, Burp Suite, Gobuster, Nikto, Wireshark, tshark, Sysmon, Penligent AI, SafeLine WAF, Docker, IDS/IPS, Packet Analysis

SOC Operations: Security Operations Center (SOC), Intrusion Detection & Prevention (IDS/IPS), Alert Triage, Security Incident Response, Threat Intelligence, Indicators of Compromise (IOC), Threat Hunting, Security Monitoring, Vulnerability Management, Risk Assessment

Offensive Security: Web App Penetration Testing, SQL Injection, XSS, CVE Analysis, Exploitation (Metasploit), Privilege Escalation (Linux), Password Attacks, OWASP Top 10, AI-Assisted Pentesting, Cyber Kill Chain

Defensive Security: Honeypot Deployment, Log Management & Correlation, Endpoint Telemetry, WAF, Incident Response, Threat Detection, File Integrity Monitoring (FIM), Geo-IP Enrichment, Malware Analysis, Digital Forensics (DFIR), AI Security Automation

Identity & Access Management: Active Directory Domain Services (AD DS), Group Policy, Organizational Units (OUs), Domain Administration, DHCP, DNS, NAT

Frameworks & Standards: MITRE ATT&CK Framework, Cyber Kill Chain, OWASP Top 10, Incident Response Lifecycle, SOC 2, ISO 27001

Operating Systems & Virtualization: Kali Linux, Ubuntu Server 22.04, Windows Server 2019, Windows 10/11, VirtualBox, VMware

Networking & Protocols: TCP/IP, UDP, ICMP, DNS, HTTP/HTTPS, DHCP, NAT, OSI Model (All 7 Layers), Network Security, Bridged Networking

Programming & Scripting: Python, KQL, PowerShell, Bash Scripting, JSON, curl

AI & Emerging Tech: AI Security, LLM Security (CLLMSP), AI Prompt Engineering, AI Agent Integration, AI-Powered Pentesting

ACTIVITIES & ACHIEVEMENTS

- Builds enterprise-grade cybersecurity home labs replicating real Security Operations Center (SOC) environments — covering cloud SIEM (Azure + Microsoft Sentinel), intrusion detection, threat intelligence, Active Directory, endpoint monitoring (Sysmon + Splunk), honeypot deployment, and AI-powered penetration testing.
- Completed Microsoft AI Skills Fest 2026 and holds 5 certifications spanning LLM Security, AI Essentials, and AI Fluency — combining traditional blue-team incident response with emerging AI security disciplines.
